SELECTED WORK

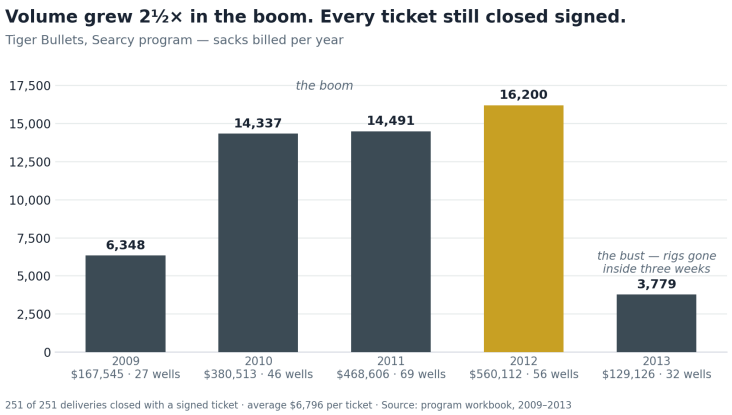

What follows are the engagements I can still document end to end. They are samples from a much larger body of work — most of the rest ran on company systems and stayed behind when I left. The numbers are the real ones, from the records that survive.

FleetSheet — Python + SQLite

Designed, built, and shipped a desktop app for one-desk equipment-rental shops: rentals and reservations, compliance expiration tracking with vendor contacts, and invoicing / accounts receivable whose lines mirror the customer's PO exactly. Offline-first, no accounts, no telemetry. Current release v1.1.2 (October 31, 2026) — Inno installer, signed automatic updates, and an update checker verified against the live feed before the release was called done. Free to download and use — github.com/jrmcw-source/FleetSheet

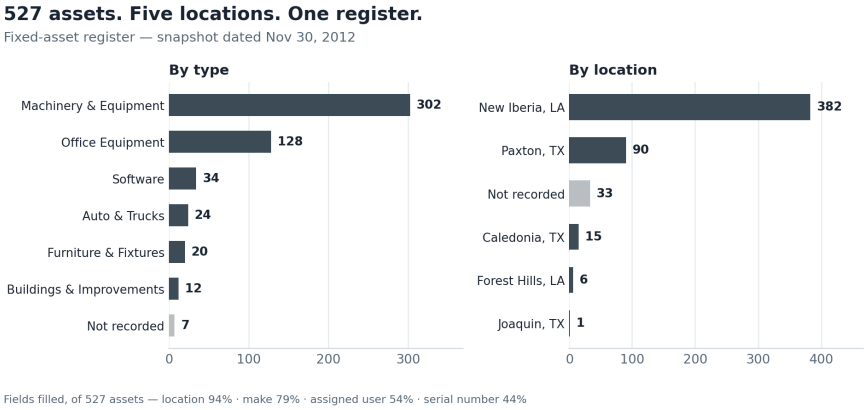

Field Inventory & Billing — Tiger Bullets™ (Excel)

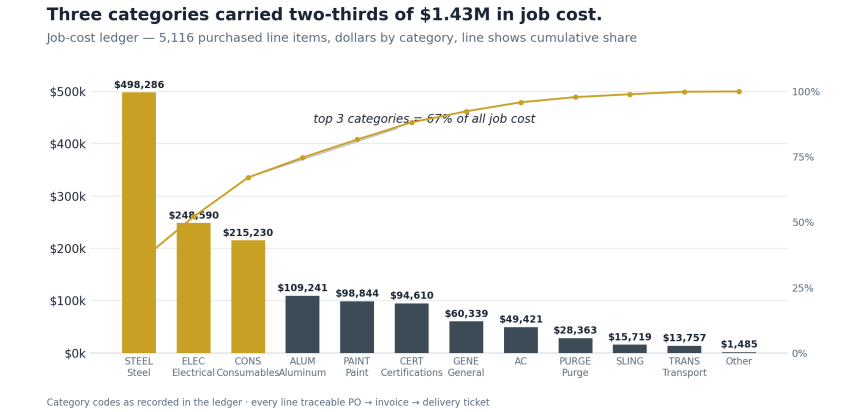

I ran the tracking system for a lost-circulation product program in an Arkansas shale play, 2009–2013. 55,886 sacks (1.4M lbs) came in; 251 delivery tickets went out across 227 wells and 15 rigs; $1.71M got invoiced, and every logged delivery closed with a signed ticket. One workbook held deliveries, warehouse and field inventory, signed-ticket billing, and the count set against the math — with the difference shown, not buried.

Asset Register & Job-Cost Ledger (Excel)

I kept the two records a multi-site oilfield services company ran on: a register of 527 assets — serial numbers, warranties, and location, work area, and assigned-user accountability, across five sites — and a job-cost ledger of 5,116 purchased line items, $1.43M across 92 projects, every line traceable from purchase order to vendor invoice to delivery ticket.

Asset, Compliance & Billing Database — MySQL + Python

The databases I built at the office held what the company's Dynamics system didn't: rentals, billing, job assets, certification and compliance dates, accounts receivable — 150+ assets tracked across job sites. The reports management ran on came out of them, kept to the penny. And when my numbers and the Dynamics general ledger didn't meet, reconciling the two was my job.

Range

The work put me alongside operations of every size. Through Pro-Log I worked with and for majors — Shell, BP, Petrobras, BHP Billiton, Chevron, ExxonMobil, GE, Maersk — and with the service companies under them: Baker Hughes, Halliburton, Schlumberger, Chesapeake, MI-SWACO, Fugro, and a long tail of third-tier shops and vendors. Cooperative work, side by side; I was never on their payroll. The habits that held up at that scale are the same ones that run a one-desk shop: know where everything is, bill it exactly, prove the count.
